FYP REQUIREMENTS CLARIFICATION QUESTIONS

Project Title

Salesforce Mobile Business Analytics & Forecasting Application

Purpose

Based on the initial project description provided by Nespon Solution, our FYP team would like to clarify the following requirements before proceeding with system design and development.

The purpose of these questions is to understand the **actual business problem, expected project scope, available resources, and technical requirements**.

SECTION 1: BUSINESS PROBLEM & PROJECT OBJECTIVES

Question 1: Actual Business Problem

Question:
What specific business problem does Nespon Solution expect our FYP team to solve through this project?

For example:

- Limited mobile access to business data
- Difficulty monitoring sales performance
- Difficulty tracking leads and opportunities
- Delayed decision-making
- Lack of forecasting capabilities
- Another specific business problem

Question 2: Real Business Use Case

Question:
Is this project based on a real problem faced by Nespon Solution or one of its clients, or should we develop a general/demo business scenario?

Question 3: Current Process

Question:
How are sales, leads, opportunities, and business performance currently monitored?

For example:

- Salesforce Reports and Dashboards
- Excel/manual reports
- Another CRM system
- Other process

Question 4: Current Challenges

Question:
What are the main limitations or challenges in the current process, and why are the existing Salesforce Reports or Dashboards not sufficient?

Question 5: Project Priorities

Question:
What are the top **3–5 priorities** that Nespon Solution expects this FYP to achieve?

Please prioritize areas such as:

- Mobile accessibility
- Business analytics
- KPI monitoring
- Lead management
- Opportunity tracking
- Forecasting
- Notifications
- Faster decision-making

SECTION 2: PROJECT SCOPE & EXPECTATIONS

Question 6: Mandatory Features

Question:
Which features are absolutely mandatory for the final FYP?

Question 7: Optional and Future Features

Question:
Which features should be considered:

- Important but optional
- Advanced features
- Future enhancements

This will help us clearly define the project scope.

Question 8: Final Demonstration Expectations

Question:
What does Nespon Solution expect our team to demonstrate at the end of the FYP?

For example:

- Salesforce Mobile Application
- Interactive Dashboards
- Analytics
- Forecasting
- Automation
- Advanced Salesforce Development
- AI/ML

SECTION 3: SALESFORCE ENVIRONMENT & DATA

Question 9: Salesforce Environment

Question:
Will Nespon Solution provide a Salesforce environment for this project?

If yes, which environment should we use?

- Developer Edition
- Trailhead Playground
- Sandbox
- Existing Salesforce Organization

Question 10: Salesforce Access and Permissions

Question:
What level of access will our FYP team have in the Salesforce environment?

Are we allowed to:

- Create or modify objects and fields?
- Create Reports and Dashboards?
- Create Salesforce Flows?
- Configure Lightning Pages?
- Develop Apex code?

Question 11: Available Data

Question:
What type of data will be available for this project?

- Real business data
- Anonymized data
- Sample/demo data
- Synthetic data

Question 12: Historical Data for Forecasting

Question:
How much historical data will be available for analytics and forecasting?

For example:

- Historical sales data
- Revenue records
- Opportunity history
- Lead conversion history

Question 13: Required Salesforce Objects

Question:
The project description mentions **Lead, Opportunity, and Account** objects.

Are these the main objects we should use, or are additional Salesforce objects or custom objects required?

SECTION 4: USERS & ACCESS

Question 14: Target Users

Question:
Who are the primary users of the application?

Please confirm the required roles:

- Executives
- Sales Managers
- Sales Representatives
- Business Analysts
- Salesforce Administrators
- Other

Question 15: Role-Based Actions

Question:
What information and actions should each user role have access to?

For example:

- View dashboards
- View or manage leads
- View or update opportunities
- View forecasts
- Receive notifications

Question 16: Role-Specific Dashboards

Question:
Should different user roles have different dashboards, data visibility, and access permissions?

SECTION 5: MOBILE APPLICATION REQUIREMENTS

Question 17: Mobile Application Approach

Question:
Which mobile application approach does Nespon Solution expect us to use?

Option A: Salesforce Mobile App + Lightning App Builder

Option B: Custom Mobile Application using Salesforce Mobile SDK

Option C: External Mobile Application integrated with Salesforce APIs

Please confirm the preferred approach.

Question 18: Mobile Platforms and Offline Access

Question:
Which mobile platforms should be supported, and is offline access required?

Please clarify:

- Android
- iOS
- Both
- Salesforce Mobile App only

Also, should offline access be considered:

- Mandatory
- Optional
- Future Enhancement

SECTION 6: DASHBOARDS & ANALYTICS

Question 19: Required KPIs

Question:
Which KPIs should be included in the mobile dashboard?

Possible examples:

- Total Sales
- Revenue
- Sales Growth
- Total Leads
- Lead Conversion Rate
- Open Opportunities
- Pipeline Value
- Win Rate
- Sales Target Achievement

Please select and prioritize the most important KPIs.

Question 20: Dashboard Features

Question:
What dashboard functionality is required?

For example:

- Filters
- Date range selection
- Salesperson or region filters
- Drill-down into detailed records
- Interactive charts

Question 21: Meaning of Real-Time

Question:
What does **“real-time updates”** specifically mean for this project?

For example:

- Instant updates when Salesforce data changes
- Automatic refresh at specific intervals
- Standard Salesforce synchronization

SECTION 7: LEADS & OPPORTUNITIES

Question 22: Lead Management Scope

Question:
What actions should users be able to perform on Leads?

Please confirm whether users should:

- View Leads
- Create Leads
- Edit Leads
- Update Lead Status
- Assign Leads
- Convert Leads

Also, is identifying or scoring high-potential leads required?

Question 23: Opportunity Management Scope

Question:
What information and actions should be available for Opportunities?

Should the application:

- Track opportunity stages?
- Display amount and probability?
- Display expected closing dates?
- Allow opportunity updates?
- Identify stagnant or high-risk opportunities?

SECTION 8: FORECASTING & AI

Question 24: Forecasting Requirements

Question:
What exactly should the application forecast?

For example:

- Future Sales
- Revenue
- Opportunity Closure
- Pipeline Performance
- Lead Conversion

Also, what forecasting period is required?

- Monthly
- Quarterly
- Yearly
- Other

Question 25: Forecasting Approach

Question:
Which forecasting approach does Nespon Solution expect?

- Salesforce Native Forecasting
- Statistical Forecasting
- Machine Learning
- Salesforce Einstein
- External AI/ML Solution

Question 26: AI Requirement

Question:
Is AI or Machine Learning a mandatory requirement for the current FYP, or should AI-powered forecasting remain a future enhancement?

SECTION 9: NOTIFICATIONS, SECURITY & TECHNICAL CONSTRAINTS

Question 27: Notifications and Automation

Question:
Which events should trigger notifications or alerts, and who should receive them?

For example:

- New Lead
- Lead Assignment
- Opportunity Update
- Deal Stage Change
- Target Missed or Achieved
- Follow-up Reminder
- Opportunity Closing Date

Also, should these processes be automated using **Salesforce Flows**?

Question 28: Security and Data Access

Question:
Are there any security or privacy requirements regarding:

- Access to business data
- User permissions
- Role-based access
- Record visibility
- Sensitive information

Question 29: Technical Restrictions

Question:
Are there any technical restrictions or requirements that our FYP team must follow?

Please clarify whether we are allowed to use:

- Apex
- Salesforce APIs
- External APIs
- External AI/ML services
- Salesforce Einstein
- Third-party applications

Also, should the project use only **free/educational Salesforce resources**, or are paid features available?
